studyflow

A calmer way to plan your semester.

Mobile-first schedule builder that turns classes, study goals and campus life into one balanced week.

PROJECT
UI/UX case study

PLATFORM
Responsive web · mobile first

YEAR
2026

01 OVERVIEW

Planning a semester shouldn't feel like a second job.

studyflow asks three quick questions — what you're taking, how you like to study, and what else fills your week — then builds a balanced weekly plan that protects focus time around everything else.

MY ROLE

Product design, UX, UI and front-end build

DELIVERABLES

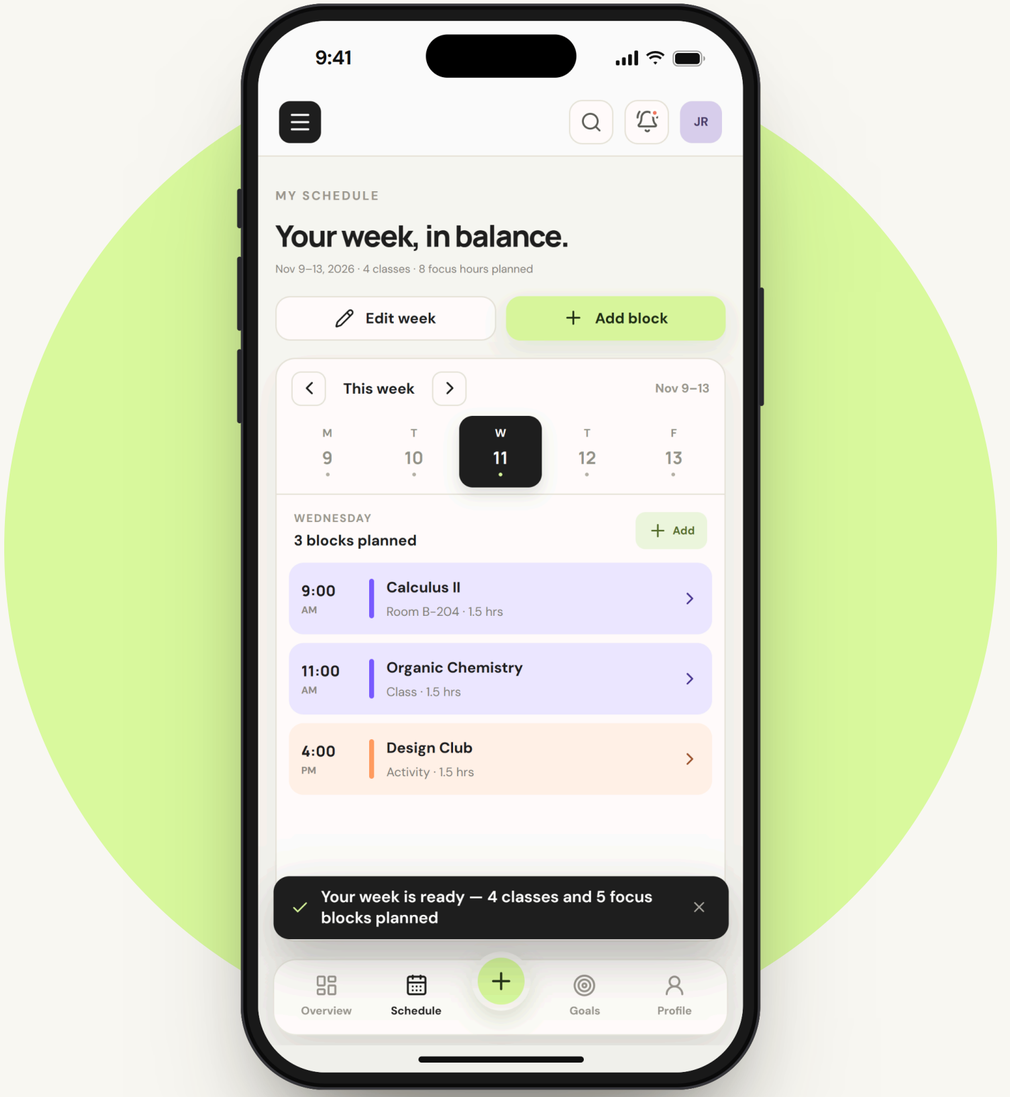

User flows, wireframes, UI kit, working app

BUILT WITH

React · TypeScript · Vite · Tailwind · Figma

LIVE

coolgithub1.github.io/School-Schedule-Builder-App

02 THE PROBLEM

Students don’t lack ambition. They lack a plan that survives the week.

01

Scattered

Classes live in the student portal, deadlines in five syllabi, everything else in notes and group chats.

02

Rigid

Hand-made plans break the moment a week changes — so they get abandoned by week three.

03

Heavy

Most planners take longer to set up and maintain than the time they actually save.

DESIGN PRINCIPLES

Calm

Warm palette, generous space, one clear primary action per screen.

Balanced

Study time spread across the lightest days, tracked against a weekly goal.

Forgiving

Undo everywhere. Conflicts warn instead of block. Nothing is ever lost.

03 WHO IT’S FOR

Meet Jordan.

Proto-persona · second-year student juggling four classes, a design club, the gym and a part-time life.

> **“I know what I need to do. I just never know when I’m going to do it.”**

GOALS

- Protect real study time every week
- See today at a glance, between classes
- Never get surprised by a deadline

FRUSTRATIONS

- Generic calendars don’t understand classes vs. study
- Re-planning after one busy day feels like starting over
- Apps that need an account before showing any value

CONTEXT

- Plans on a phone, between lectures
- Checks the week on a laptop on Sunday night

From first tap to a full week in three steps.

CORE APP

Overview
Today · focus · deadlines

- Open focus window → add
- Complete a deadline

⟷

Schedule
Week + day agenda

- Add block
- Edit block
- Drag to move
- Switch week

⟷

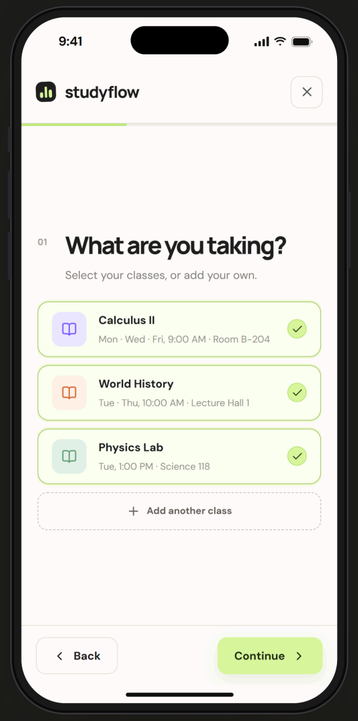

Study goals
Hours · subjects · deadlines

- Mark session done
- Adjust goal
- Add deadline

EVERYWHERE

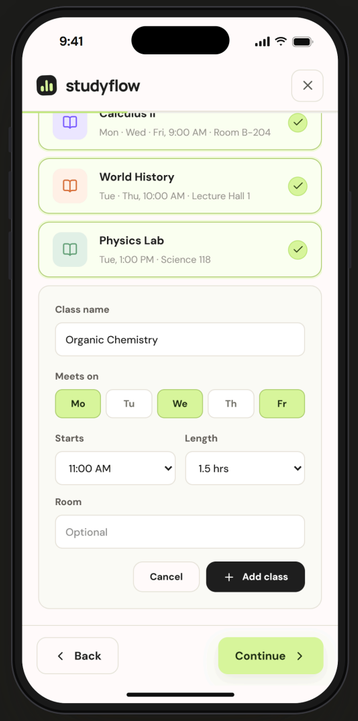

- Search ⌘K
- Notifications
- Menu
- Settings
- Undo toasts

Three questions. Zero blank pages.

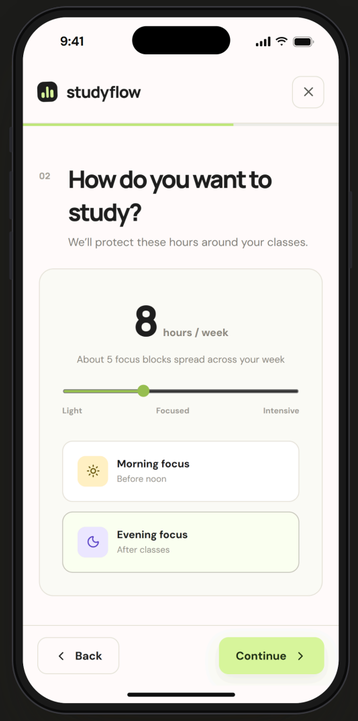

Pick your classes

Common classes are pre-filled — tap to keep or drop.

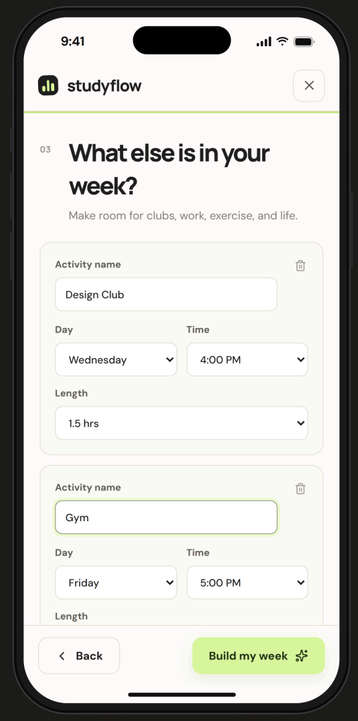

Add your own

Inline form: name, days, time, length, room.

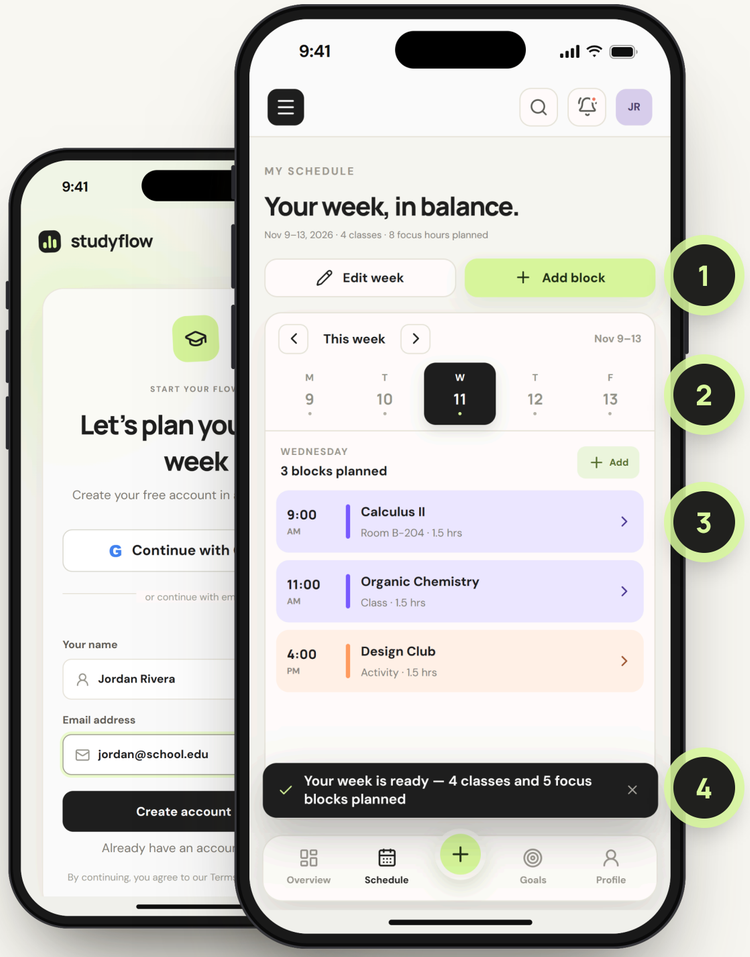

Set a study goal

Hours per week + morning or evening focus.

Make room for life

Clubs, work and gym become fixed blocks.

06 THE PAYOFF

Your week is ready — and it already makes sense.

1 One-tap add

The lime primary action is always within thumb reach.

2 Day picker

Dots show which days have plans; today is pre-selected.

3 Color-coded agenda

Purple classes, green study, orange activities — scannable in a glance.

4 Instant feedback

A toast confirms what was built: classes and focus blocks.

07 SMART SCHEDULING

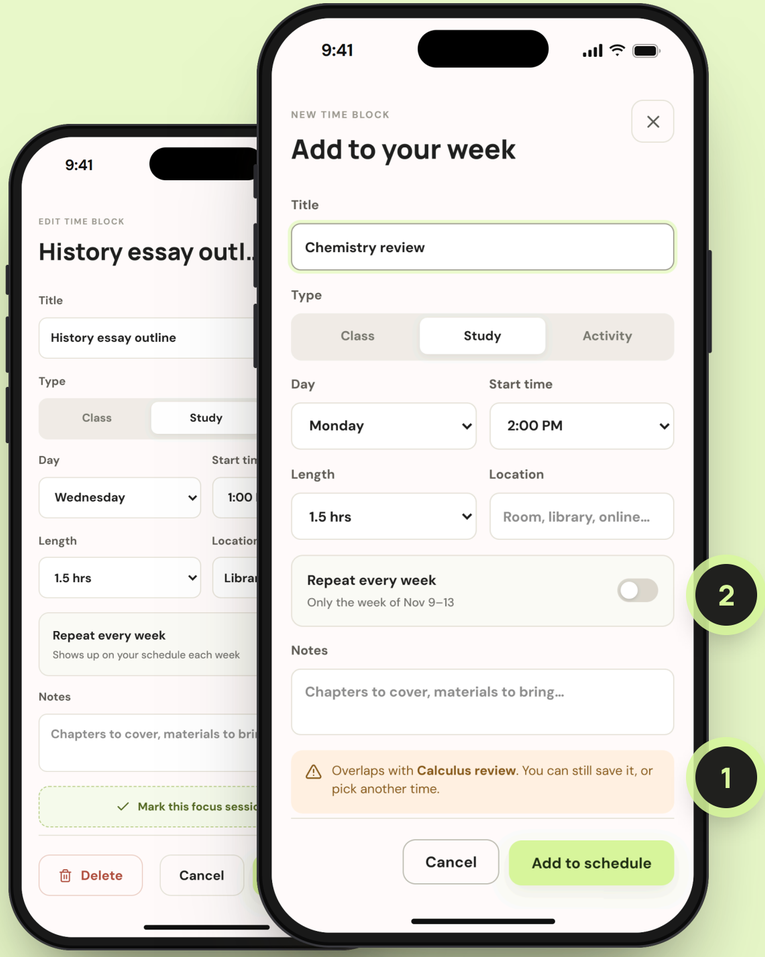

Editing that guides instead of scolds.

1. **Conflicts warn, never block**
   Overlaps are explained in plain language — the student decides.

2. **Weekly or one-off**
   A single toggle separates routines from this-week-only plans.

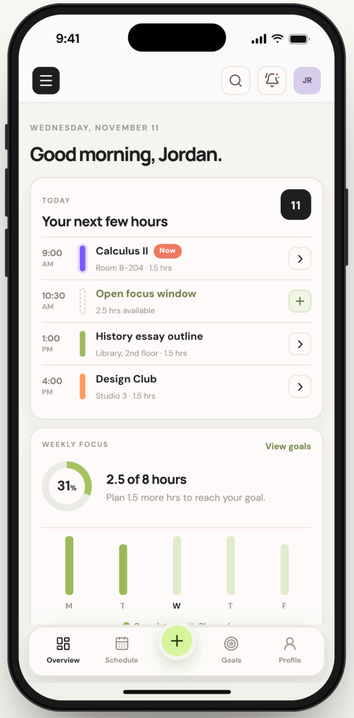

3. **Done means done**
   Study blocks can be checked off right from the editor.

4. **Undo everywhere**
   Every delete and move can be reversed from the toast.

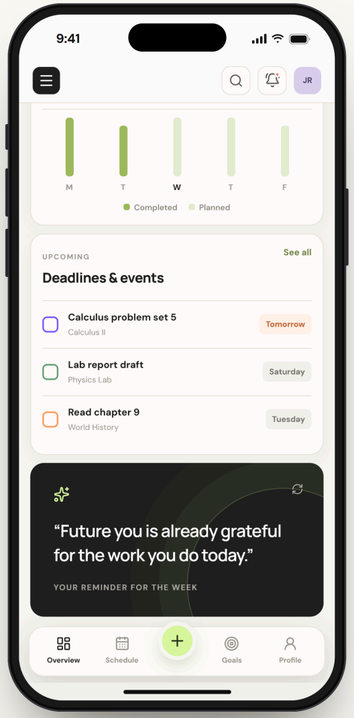

Today, at a glance.

Opened between classes, the overview answers one question fast: **what's next, and where can I fit focus time?**

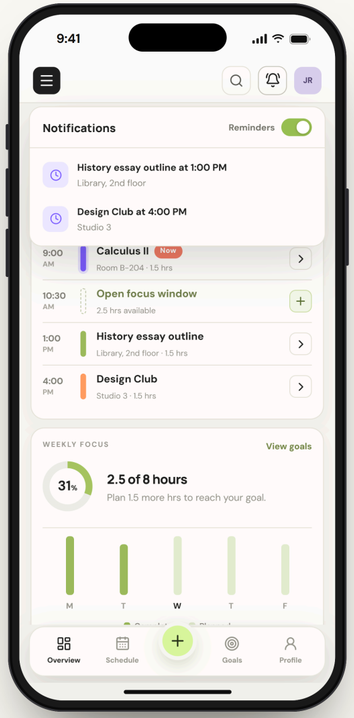

Next few hours

A live timeline with an open focus window you can fill in one tap.

Weekly focus

Progress ring and daily bars compare completed vs planned hours.

Gentle reminders

Upcoming blocks and deadlines due soon, with one switch to pause.

09 STUDY GOALS

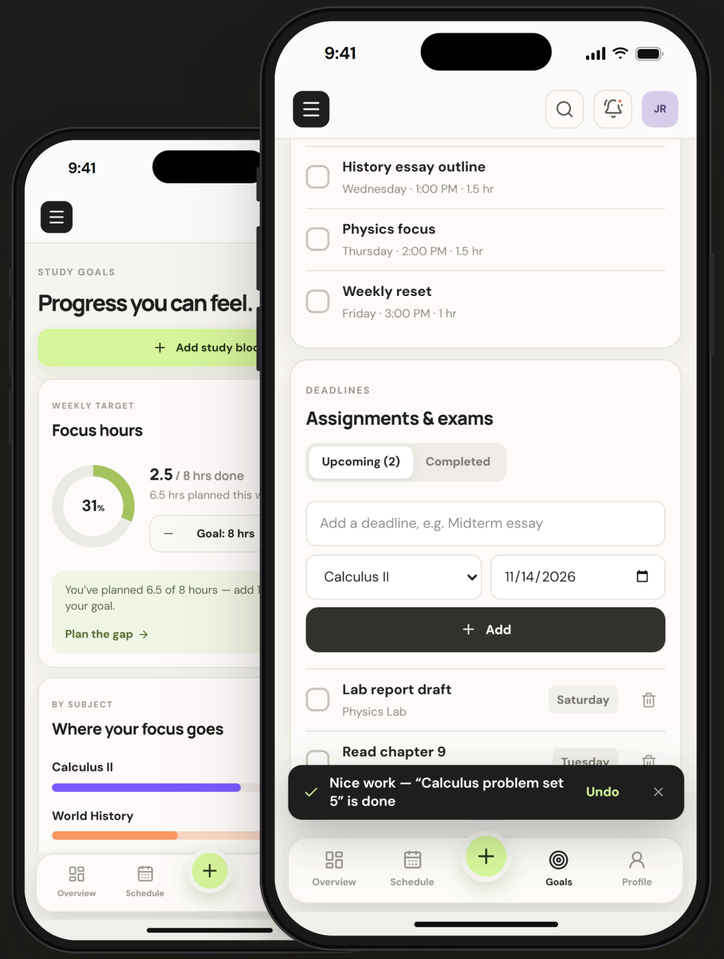

Progress you can feel.

Focus hours, per-subject balance and deadlines live together, so planning and doing happen in the same place.

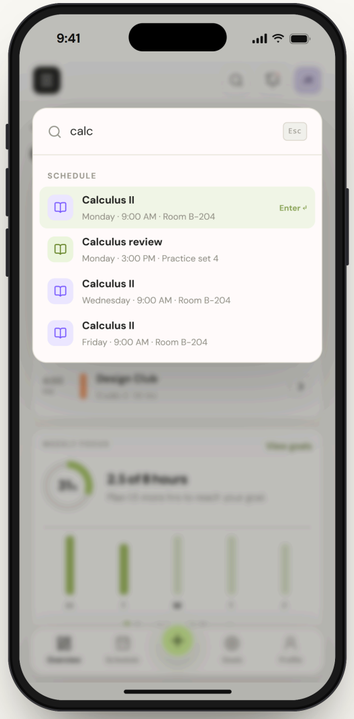

1. **Weekly target**
   A stepper adjusts the goal; the ring updates everywhere.

2. **By subject**
   See which class is getting your attention — and which isn't.

3. **Deadlines**
   Add, complete and undo in seconds, sorted by what's due.

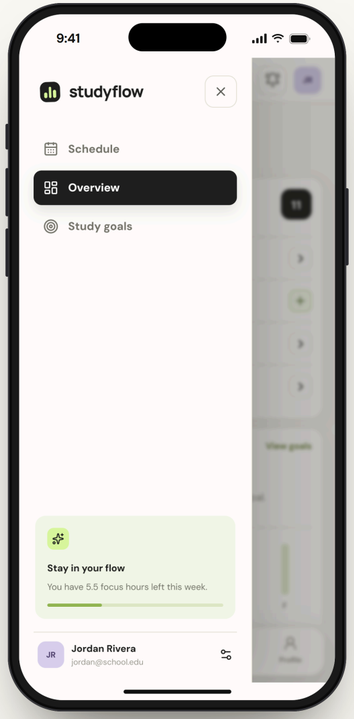

The small screens that make it feel complete.

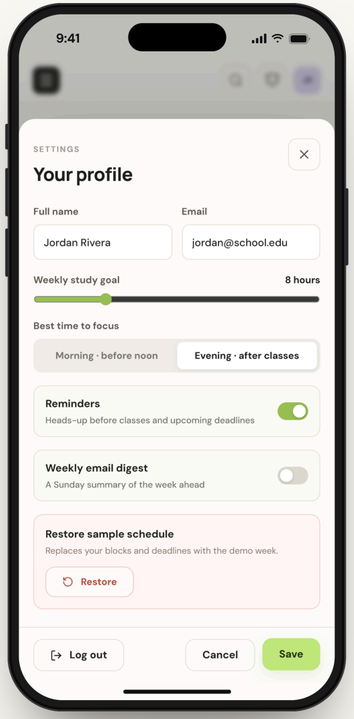

Search

Find any class, block or deadline — ⌘K on desktop.

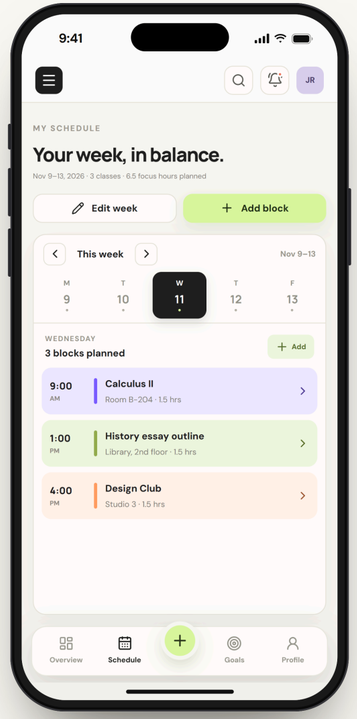

Menu

Navigation plus weekly progress, one tap away.

Settings

Profile, goal, focus time and reminders in a sheet.

Day agenda

Each day as a list — big targets, clear times.

Warm, soft and quietly confident.

Mobile first. Sunday-night-planning ready.

On desktop the week becomes a drag-and-drop calendar with a live “now” line; on phones it collapses into a day picker and agenda.

Small details, big calm.

Value before sign-up

The landing page shows a real week preview; any email opens a sample week.

Forgiving by default

Deletes, moves and completions all come with an Undo toast.

Plain-language errors

“Pick at least one class to continue” beats a red outline every time.

Thumb-zone actions

A raised add button and bottom navigation keep key actions reachable.

Keyboard friendly

⌘K search, Esc to close, Enter to open — with visible focus states.

Private by design

No backend: schedules stay on the student’s own device.

studyflow

Thanks for scrolling by.

Try the live prototype — it runs right in the browser.
